1. Clean and prepare wound according to local protocol.

Press
4. Insert the batteries into the pump.
5. Join the pump to the dressing by twisting together the tubing connectors.
6. Press the orange button to start the application of negative pressure. The green light will start to flash (indicates system working OK).

Go
7. Apply the fixation strips to the four sides of the dressing.
8. The pump has a 7 day life and the dressing may be left in place for up to 7 days depending on the level of exudate.
9. When a filler is used, the filler and the PICO dressing should be changed 2 to 3 times a week.

Dress
2. Peel off the central release handle and place the dressing centrally over the wound. The port should be uppermost from the wound.
3. Remove the other two handles and smooth the dressing around the wound to prevent creasing.
