Value-based health care
LKC resource guide | 2019-10-30

What is value-based health care?

What is value-based health care exactly? Value-based healthcare measures the costs and resources used for services and the benefits of those services to patients.

“Globally, healthcare systems are struggling with rising costs, increasing demand for services, inequitable access and variations in the safety and quality of services. To ensure a sustainable healthcare system, it is acknowledged that clinicians and consumers must question existing models of care to ensure there is real benefit to the patient for the investment of resources.”
